DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 9-11 and 14 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US Patent 6678030 ("030").

Per claims 9 and 11, 030 teaches a method of manufacturing a liquid crystal display device comprising: forming a thin film transistor substrate [sub1]; forming a color filter substrate [sub2]; forming column spacers on one of the thin film transistor substrate and the color filter substrate [soc(1) and soc(2)], wherein the height of the column spacers differ as the position of the column spacers differ [soc(1) and soc(2) have differing heights see figures 5-6]; and bonding the thin film transistor substrate and the color filter substrate to each other [see figure 4].

Per claim 10 and 14, 030 teaches the method of claim 9, wherein the column spacers at a lower end of the display device are greater in height than the column spacers at an upper end of the display device [the differing height spacers are formed over the entire display and thus some have a greater height at the lower end].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

Art Unit: 2871

such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-13 rejected under 35 U.S.C. 103(a) as being unpatentable over 030.

Per claims 12-13, 030 the method of claim 9, but fails to teach the column spacer are formed of photo acryl and the column spacers are formed by an ink jet method. However, it was well known to one of ordinary skill at the time of invention for form the spacer from acryl and use a ink jet method in order to reduce the number of method steps.

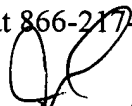

Allowable Subject Matter

Claims 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
